SUMMARY

Full Stack Developer (MERN · TypeScript · REST APIs) with professional experience building and maintaining production-oriented web applications. Experienced in Node.js/Express backends, React/Next.js frontends, SQL databases, API integrations, authentication, CMS/e-commerce platforms, and AI integration. Currently working as a Trainee – Web/App Development at NextDynamix Tech, contributing to full-stack applications and modern development workflows. B.Tech Computer Engineering, MIT World Peace University.

TECHNICAL SKILLS

Languages: Java · Python · C/C++ · JavaScript · TypeScript · HTML · CSS

Frameworks & Libraries: React.js · Next.js · Redux · Node.js · Express.js · FastAPI · jQuery · Tailwind CSS · OpenCV

Databases: MySQL · PostgreSQL · MongoDB · Prisma ORM

CMS & E-commerce: Strapi · Medusa.js

Tools & Practices: Git · GitHub · REST APIs · Docker · GitHub Actions · Linux · Agile/Scrum · System Design · AI & Machine Learning · Computer Vision

EXPERIENCE

Trainee – Web/App Development

Jun 2026 – Present

NextDynamix Tech Pvt. Ltd.

Paid Training Program

- Developing and maintaining full-stack web applications using TypeScript, React/Next.js, Node.js, Express.js, FastAPI, and REST APIs across production-oriented projects.
- Contributing to the development of the KUDLZ pet-commerce platform across storefront, backend APIs, Medusa, Strapi CMS, authentication, product catalogue, payments, and third-party integrations.
- Implementing scalable backend features using TypeScript, Prisma, SQL, JWT authentication, RBAC, API validation, and reusable service architecture.
- Working with Docker, Git/GitHub, GitHub Actions, Linux, PostgreSQL/MySQL, and modern frontend component libraries to support development and deployment workflows.
- Collaborating with senior developers, QA, and cross-functional teams to debug issues, perform UAT, review existing code, and deliver production-ready features.

Web Developer Intern (Contract)

Jul 2025 – Dec 2025

Intersect Creative

Fixed-term

- Reduced booking-system error rate to zero during QA by architecting input-validation and security-hardening layers across a Node.js / Express.js backend handling 500+ concurrent booking records.
- Improved database query throughput by 35% by redesigning relational MySQL schemas and indexing strategies, cutting average response time for high-traffic booking lookups.
- Shipped a responsive, accessible front-end with sub-200ms real-time UI feedback using JavaScript and jQuery, reducing user-reported friction in the appointment scheduling flow.
- Contributed to Agile sprint planning and daily stand-ups, aligning backend delivery milestones with cross-functional design and QA teams.

IT & Technology Intern (Contract)

Feb 2025 – Jun 2025

STL Digital Limited

Fixed-term

- Accelerated project delivery workflows by mapping end-to-end IT pipeline bottlenecks and presenting a prioritised remediation plan to senior leadership, adopted across 2 active sprint cycles.
- Authored structured technical reports for C-suite stakeholders, translating system-analysis findings into actionable delivery recommendations — maintaining zero misalignment between engineering output and strategic OKRs.
- Supported real-time technology service operations across live infrastructure projects, collaborating with the Technology Services team to keep sprint velocity on track.

Web Developer Intern (Contract)

Jun 2024 – Jan 2025

Netsol IT Solutions Pvt. Ltd.

Fixed-term

- Cut API response latency by 40% by architecting RESTful endpoints with Node.js / Express.js and redesigning the MySQL schema with optimised indexing — directly improving data retrieval speed for the appointment booking module.

- Hardened both admin and client modules against injection and auth vulnerabilities, reducing post-launch security issues to zero across the full deployment.
- Shipped dynamic, responsive UIs with sub-200ms real-time feedback loops using JavaScript and jQuery, improving end-user task-completion rates across the platform.

PROJECTS

Aurevia – AI Medical Research Copilot | *MERN · TypeScript · REST APIs · AI* | [Live Demo](#)

- Engineered a production MERN platform that aggregates 10,000+ PubMed, OpenAlex, and ClinicalTrials.gov entries into a real-time clinical evidence engine — cutting estimated manual research lookup time by 60% for target users.
- Integrated 3 external research APIs into a modular Node.js/Express backend pipeline with session memory, authentication, and what-if scenario analysis on responsive React dashboards.

NexaWell – AI Digital Health Platform | *MERN · Tailwind CSS · AI*

- Architected a multi-role healthcare platform (patient · doctor · admin) serving appointment scheduling, EHR management, and real-time chat — integrated an AI symptom checker that improved self-diagnosis accuracy by 40%.
- Embedded AI-powered food detection and a health assistant chatbot, extending the platform's clinical utility beyond scheduling into preventive care.

Celebrity Face Recognition System | *Python · OpenCV · Deep Learning*

- Achieved ~94% recognition accuracy across 50+ subjects by training deep-learning facial embeddings with OpenCV, with live webcam integration, bounding-box overlay, and name annotation.
- Reduced average inference latency by 30% via batch preprocessing of the encoding pipeline, enabling smooth real-time deployment.

Full Stack Company Website | *MERN · REST APIs · JWT Auth*

- Delivered a production-grade company website with admin panel, product catalogue, and customer inquiry management — secured via JWT-based authentication, reducing admin overhead by 25%.

EDUCATION

MIT World Peace University
B.Tech in Computer Engineering

Pune, India

CERTIFICATIONS

Designed system architecture and UML/ERD diagrams for a scalable data-processing pipeline (**Walmart Advanced Software Engineering**, Forage)

Built and validated a front-end date-selection component against automated test suites (**Skyscanner Front-End Engineering**, Forage)

Proposed design and architecture for an interactive business dashboard (**Deloitte Technology Simulation**, Forage)
